

Bespoke Solutions...

The soil-less production process developed by Wildflower Turf Limited is ideal for the production of bespoke or grown to order turf, which allows you to specify the exact seed mix that you require for your particular project.

Examples of this are wide ranging and include...

A seed mix from the West coast of Ireland that was harvested from plants near the Cliffs of Moher, shipped to our farm and grown as a turf before returning to the cliffs 12 weeks later. We have also supplied the Olympics with a variety of bespoke mixes specifically for various sites.

A variety of different grass mixes:

- Drought tolerant,
- Slow growing / ornamental grasses,
- New seed mixes, as made to order turf for seed companies.

A variety of wild flower mixes to suit:

- Soil types,
- Salt tolerant mixes for close proximity to the sea (including thrift and sea pinks),
- Plant height,
- Colour variation (for example the inclusion of annuals),
- Green roofs and sedum roofs,
- The Environment Agency, English Nature, The RHS, RSPB, site specific mixes designed by ecologists, et al.

Unusual products we have grown to order include:

- Cerastium or "Snow in Summer" turf,
- Chamomile Lawn Turf,
- A crop of Barley for a show garden,
- Single variety turf for show gardens – Yorkshire Fog turf, Cocksfoot turf, Brome Grass turf, et al.

Notes...

Bespoke or grown to order turf takes approximately 12 weeks to produce during our growing season (April to August) and generally requires a minimum order of 400m².

It is also possible to incorporate various grades of nettings, materials or grids to enhance the strength of the turf for civil engineering purposes such as erosion control and soil stabilisation. For example UPM Tilhill contacted us to fulfil

Installation using big rolls of bespoke turf

their remit to strengthen the Jubilee River Bank which was 350m high, near Windsor Castle following damage caused by flood water. The seed mix was specified by the Environment Agency, specifically to increase biodiversity along the embankment. The Wildflower Turf was pre-grown

to order and cut as "big turfs" measuring 2m x 20m. Once on site, these were then rolled onto a boom that was hung from chains off a JCB and then carefully unrolled down the bank.

Four weeks after installation

For more information please get in touch with us, where we would be happy to discuss your project specifications with you.

Extra splash of colour by adding annuals

Wildflower Turf has been successfully installed at...
Paultons Park - Peppa Pig World | Highgrove | Natural History Museum

Wildflower Turf also supply film sets...
Harry Potter | Alice In Wonderland

Wildflower Turf have supplied...
The OLYMPICS 2012
