

WILD FLOWER TURF PRODUCTION

Wild Flower Turf creates wild flower meadows, bio-diverse environments and architectural landscaping. Our unique soil-less wild flower turf production system is quick and easy to install, it's light to handle and it's ideal for environmentally friendly green roof projects. In all - an ideal solution for architects, builders, civil engineers and landscape gardeners, for today's sustainability demands.

PRINCIPLES OF SOIL-LESS TURF

- Compost based growing medium
- Compost laid over a membrane – matted root structure
- Incorporates a net reinforcement
- Speed of development – growing to order in 10-12 weeks
- Speed of establishment once laid – undamaged roots

WILD FLOWER TURF PRODUCTION

Mature plants with a strong root system for easily handled rolls of Wild Flower Turf

THE END RESULT

LANDSCAPE APPLICATIONS

- Large rolls speed up installation.
- Dense, undamaged roots speed up plant establishment and soil stabilisation.
- Root structure acts as a blanket to successfully compete with and dominate weeds.
- Native grasses and flowers or bespoke seed mixes available.
- Seed ratios - (50%) wildflowers and (50%) grass.
- Very little maintenance required.
- Lighter turf compared to soil based turf.
- Attracts insects, birds and mammals.
- Visually attractive and eye-catching.
